

dbt_models

dbt project for transformations on the DuckDB database produced by bam-processing.

Install

```
cd dbt_models
uv sync
```

Configure the source database

Set the DuckDB file that contains the `quant_*` tables:

```
export DBT_DUCKDB_PATH=/absolute/path/to/sample.features.duckdb
```

If `DBT_DUCKDB_PATH` is not set, dbt falls back to `../models/sample.features.duckdb`.

Run

```
uv run dbt --profiles-dir . run
```

Models

- `stg_record_methylation_counts`: number of methylation events per record, including records with zero methylation events.
- `sample_mean_methylation`: mean number of methylation events per record for the sample in the DuckDB database.
